Summary

Final-year B.Tech student at Delhi Technological University with a Minor in Computer Science. Experienced in building scalable REST APIs, role-based access systems, and cloud infrastructure tooling across full-stack environments. Proven ability to ship production features reliably - from authentication pipelines at a Web3 startup to automated AWS compliance tooling. Strong foundation in Data Structures Algorithms with 800+ problems solved.

Education

Delhi Technological University

Bachelor of Technology - Engineering Physics
Minor in Computer Science

Delhi, India

Nov 2022 - Aug 2026
(Expected)

Experience

Lokachakra | Software Developer Intern

Jun 2025 - Aug 2025

- Designed and deployed end-to-end authentication workflows integrating 3 methods (Email OTP, WalletConnect, ZK Login), cutting sign-up drop-off by 40%.
- Established wallet provisioning, session management, and account recovery flows across 4+ user journey stages, improving onboarding reliability for the beta platform launch.
- Developed an API integration layer connecting frontend with 3+ backend services (auth, session, key-management), maintaining consistent user state across distributed service boundaries.
- Integrated mnemonic-based account recovery, enabling users to securely restore wallet access across supported sign-in methods.

Projects

Role-Based Project Management System

[Live Demo](#) | [Github](#)

- Architected a project management platform with 18+ REST APIs covering issue lifecycle tracking, user management, and cross-team workflow automation.
- Implemented JWT-based authentication and fine-grained RBAC supporting 4+ user roles; manually tested access enforcement across all roles and workflow stages before deployment.
- Optimized MongoDB schemas and indexing, achieving 30-40% reduction in API response times; deployed on Railway and Vercel.

CloudSentinel – Automated Cloud Assessment Platform

[Live Demo](#) | [Github](#)

- Engineered a CIS benchmark scanner across 4 AWS services (S3, EC2, IAM, CloudTrail), running 7 automated checks and surfacing actionable compliance findings per scan.
- Automated resource discovery workflows using AWS SDK v3 to detect critical misconfigurations — identifying 5 failures including S3 public access, EC2 SSH exposure, missing CloudTrail logging, and absent root MFA.
- Rendered an interactive dashboard classifying results into 3 severity levels (4 High, 1 Medium, 2 Low), enabling operators to prioritize remediation by risk impact.

Linkify – Real-Time Chat & Video Communication Platform

[Live Demo](#) | [Github](#)

- Constructed a real-time chat and video application using React.js, Node.js, and Stream API, achieving <100ms latency for 100+ concurrent users.
- Structured 8+ server-side endpoints for messaging and event routing with TanStack Query managing client state.
- Configured user authentication and session management, securing access to messaging and video features across the platform.

Skills

• Languages	Java, JavaScript, TypeScript, C++
• Frontend Development	React.js, Next.js, Tailwind CSS, HTML5/CSS3
• Backend & Security	Node.js, Express.js, REST APIs, JWT, RBAC, Postman
• Databases	MongoDB, MySQL
• Web3	ZK Login, Wallet Connect, Mnemonic Handling
• Cloud & Integrations	AWS (S3, EC2, IAM, CloudTrail), AWS SDK v3
• CS Foundations	Data Structures & Algorithms, OOPs, OS, DBMS, System Design

Achievements

- [LeetCode Knight \(1699 Rating\)](#) - 800+ DSA problems solved.
- Top 70 Finalist - Myntra HackerRamp 2024**, selected from 30,000+ participating teams.
- Corporate Coordinator (LFC DTU) - Led a team of 10+ members and secured 5+ sponsors.
